

V-PREG

Do you have vasculitis?

Are you pregnant?

**Consider enrolling in the international
Vasculitis Pregnancy Registry!**

**Register now and help make the future
better for women like you!**

www.vpprn.org/vpreg

One of the most common questions younger women with vasculitis ask is how the disease will affect their ability to have children. Unfortunately, there is very limited information to help answer this question.

This study will help answer this question by following pregnant women with vasculitis to discover how their vasculitis and medications impact their pregnancy.

This registry will teach us how to better manage vasculitis during pregnancy to increase pregnancy success.

This registry will be collecting information to help find answers to how vasculitis impacts reproductive health and pregnancy outcomes.

Who can participate?

Pregnant women, over age 18, with one of these diseases:

- Behçet's disease
- Central nervous system vasculitis
- Cryoglobulinemic vasculitis
- Eosinophilic granulomatosis with polyangiitis (Churg- Strauss)
- Granulomatosis with polyangiitis (Wegener's)
- Henoch-Schönlein purpura (IgA vasculitis)
- Microscopic polyangiitis
- Polyarteritis nodosa
- Takayasu's arteritis
- Urticarial vasculitis
- Other types of vasculitis

The Vasculitis Patient-Powered Research Network is pleased to be working with Megan E. B. Clowse, MD, MPH from Duke University Medical Center to launch the Vasculitis Pregnancy Registry (V-PREG). USF IRB Pro00018514
